RIPE-60 - 4 May 2010

Disclaimer

All vendors have been invited to give input for this presentation. Some of them have chosen not to respond.

The information herein is based upon the information received from those who responded, combined with operational experience from me and other community members.

Vendors

- AVM - responded
- Draytek - responded
- Cisco
- Juniper - responded
- Technicolor/Thomson
- Apple
- Linksys
- Zyxel - responded

AVM vendor info

- IPv6 available for 7270 and 7570
- Roadmap for 7390
- Beta (labor), GD expected Q3 2010
- Firewall defaults to on
- ADSL, VDSL, Docsis 3 and plain ethernet
- PPP, plain IP and tunnels
- SLAAC, DHCPv6 client incl PD
- LAN includes DHCPv6 for DNS

AVM experiences

- The occasional beta mishaps:
 - MTU issues (fixed)
 - Firewall pretty buggy
- Aimed at consumers
 - No manual address configuration
 - No routing towards other hosts
 - Firewall pinholes limited to tcp/udp
- Pretty good box if you don't want anything fancy, suitable for mass

Draytek vendor info

- Vigor 2130, version 1.3.0 (GD)
- PPPoE/Bridge support
- PPPoA on roadmap for 2750
- Ethernet WAN/FTTx, VDSL on roadmap
- SLAAC/DHCPv6 PD
- 6in4 tunnel support
- Firewall defaults to on

Draytek experiences

- Unfortunately no ADSL interface
 - Solution is Vigor 120 for conversion
- Linux based box
 - Routing options
 - Firewalling
- No real issues found so far
 - But only a limited number in field
- Vigor 120 makes nice standalone box
 - Converting PPPoA into PPPoE
 - Most people use it with Linux/BSD

Cisco experiences

- 87x/88x pretty complete
- Requires licensing :(
- WLAN issues
 - 87x unknown
 - 88x version 15 confirmed fixed
- Requires some knowledge
- Packet filters default to off
- PPPoA/PPPoE/IP/tunnels
- SAAC/DHCPv6 [incl PD]

Juniper vendor info

- ScreenOS after 6.1(GD)
- SRX 10.2 onwards (beta/ED)
- ADSL/VDSL/Ethernet
- PPPoE only, PPPoA on roadmap
- WAN SLAAC/DHCPv6, PD being considered
- LAN SLAAC/DHCPv6
- Firewall defaults to ON
- Not a consumer RG

Juniper experience

- A bit of a hassle to setup
- Missing PD could be issue
- It really speaks a lot of protocols :)
- At least one happy user

Technicolor experience

- Limited
- Speedtouch 789 is still roadmap
- Work continues
- No release date yet

Apple experiences

- Latest release extreme/TC includes ‘router option’
- This has been tested
 - PPPoE doesn’t seem to start IPv6CP
 - So everything failed
- Waiting for report about static setup
 - Possible issue with ‘unnumbered’

Linksys experience

- People running OpenWRT
- Seems to work (incl DHCPv6)
- Not really suited for mass deployment

Zyxel vendor info

IPv6

- Beta on all models released in 2010
- PPPoA/PPPoE/bridge/IP
- WAN support for DHCPv6/SLAAC
- LAN support for DHCPv6/SLAAC
- ADSL/VDSL/ethernet/FTTx
- Firewall defaults to on

Zyxel experience

- Waiting for demo hardware
- Anybody ?

Others ?

- D-link
No response at all
- Iskratel
Busy building, need a few months
- Sagem ?

Question time!

- Should I continue doing this ?
- Is there a volunteer ?
 - To help out with testing
 - Gather and process information
 - And help publishing
 - Your feedback is more then welcome !
